Brand New Google Earth

After two years of redesign, Google has introduced a new Google Earth. To access the product, open a Chrome Browser. Visit <https://earth.google.com/web/> and you will notice some new tools on the left. Voyager is a new collaboration between Google and Sesame Street, National Geographic and other groups from around the globe. Voyager takes end users on interactive guided tours of the planet. It is accessible from the **ship's helm symbol** on the left of the software. New tours are added weekly.

The **die symbol**, "I'm feeling lucky" surprises the user by taking them somewhere unexpected. Google has added over 20,000 sites to this feature. Once you arrive at the location there is a knowledge card, additional images and the ability to zoom in and out of the location and explore.

On the lower right side of the browser window there are choices for 2D and 3D views. If you select 3D you can view the earth from any angle by turning and changing the horizontal and vertical view.

To read more about Google Earth visit the Google Blog post <https://blog.google/products/earth/welcome-home-new-google-earth/>

Google Arts and Culture

Artists, places, museums, rare artifacts, history and culture from around the world are just some of the items curated through Google Arts and Culture. Google Arts and Culture includes stories, images, 3D and video. Hundreds of partners share their collections online to create a global resources open to a worldwide audience. To access and explore visit <https://www.google.com/culturalinstitute/beta/>

Google Expeditions,
Google Arts and Culture
and Google Maps —
Powerful Learning Tools

Teachers can combine all three of Google's global tools as students explore a subject. Learn about the possibilities at <https://blog.google/topics/google-org/bringing-alexander-hamiltons-history-life/>
